<u>Prep for call with Tutor (Oli) -</u> <u>Tuesday May 17th: 21:00 - 21:45 (GMT+1)</u>

Attendees

- Anastasia Rizzo
- Astrid van Toor
- Leigh Feaviour

Notes

- Leigh shared draft requirements document, UML use case diagram and UML activity diagram
- Astrid and Anastasia each shared draft design documents

Things to discuss with Tutor on Thursday:
- We'll share the draft requirements and design so far (using Astrid's design as the primary document to discuss but having the others ready if needed) for feedback.
- Confirm that the use of APIs such as SerpAPI is allowed. Oli has previously replied on email to confirm using libraries is OK but we want to be sure he means APIs too.
- Confirm if interrogating Google scholar via SerpAPI is complex enough or would it be better to interrogate individual sources separately via their own APIs.
- Confirm if requirements should be included in the requirements document body, included as an appendix, or not included at all.
- Confirm criteria for the solution to be considered multi-agent (completely independent programs or functions within a single program?
